## **MEDIA ADVISORY - FURTHER REDUCTION IN EDMOND DISPOSAL WELL VOLUMES**

Following technical conferences with the Oklahoma Corporation Commission's Oil and Gas Conservation Division (OGCD), operators of 3 wells in the Edmond area have agreed to stop disposal into the Arbuckle formation. This action will result in a 95 percent reduction of current injection into the Arbuckle within a 10 mile radius around the recent earthquake activity in Edmond.

For all other Arbuckle disposal wells within the 15,000 square mile earthquake Area of Interest, including Edmond, previous volume reductions remain in effect.
